Deep Roots, Humble Beginnings

When graduate student Tom Dorsey set out to build his own bamboo fly rod in the late 60s, little did he know his experimentation would lead to the founding of a rod making company that would endure the coming decades. In 2019, Thomas & Thomas Fly Rods (T&T) celebrated its 50th year of crafting fly rods in the United States, and with that, reflects on what it's taken to make, "The rod you will eventually own."

Whether crafting graphite, fiberglass or bamboo rods, Dorsey emphasized that the T&T process does not adhere to strict formulas produced by engineering software, but rather, good old fashioned casting and hand-craftsmanship, "a tedious, but rewarding task, which I view as an empirical process, more akin to the culinary arts than science. Try and then tweak, change, try again and change some more. This not only requires good casting skills and technique, but diagnostic insight and an ability to evaluate results - what to change, where to change, to what degree and what those changes should accomplish."

Over the years, T&T has developed a reputation as the Rolls-Royce of fly rods. In 1981 President Reagan commissioned salmon rods as a wedding gift for Lady Diana and Prince Charles. Celebrity anglers around the globe have been spotted with T&T rods in hand, among them, Eric Clapton, Dale Earnhardt, Joe Montana, James Seals (of Seals and Croft) and others. As the company evolves, it's appealing to an entirely new kind of destination angler.

A new generation of fly anglers is pushing T&T rod design to the next frontier. Some of the premier professional anglers on the planet are T&T advisors and ambassadors. These pros are testing techniques and equipment in entirely new settings and conditions on new species. Using decades of angling knowledge and experience in waters all over the world, these field experts consult T&T rod builders on every design.

Technology

Premium Graphite Options

A fly rod is only as good as the materials and that go into it, and the highest modulus graphite isn't always the right choice for a given rod or purpose. Thomas & Thomas builds fly rods from a range of premium quality graphite with different strain rates and recovery speeds, providing the necessary elements for our design team to create the most effective modern tapers and actions, all while maintaining the distinct Thomas & Thomas feel.

Proprietary Bonding Agents

The performance of graphite fibers are subject to the quality of the bonding agent that holds them together. Bonding technology has been improving rapidly in recent years, and T&T has been working with industry leaders to develop a proprietary resin that improves the performance of our graphite materials. Our StratoTherm resin employs nano-scale particles to eliminate microscopic voids in the graphite. Filling these tiny gaps with our high-performance resin improves the strength, durability, and dampening characteristics of the rod blank while reducing overall weight.

Ferrule Reinforcement Process / FRP

On a multi-piece graphite fly rod, the areas immediately above each ferrule connection are the critical stress points at maximum load - that means these areas are subject to potential failure. Thomas & Thomas resolves this problem with our Ferrule Reinforcement Process - a strategic flag of high strength fiber we roll into each ferrule section reinforcing the ferrule strength and durability.

Optimal Blank Curing/OBC

The StatoTherm resin used in our graphite rod blanks requires a complex curing process to unlock its unique performance qualities. With our industry leading heat application method and precise temperature control, we meticulously regulate the process to ensure Optimal Blank Curing. OBC helps us achieve the highest level of performance with our premium graphite and bonding agents while maintaining product consistency and stringent quality control.

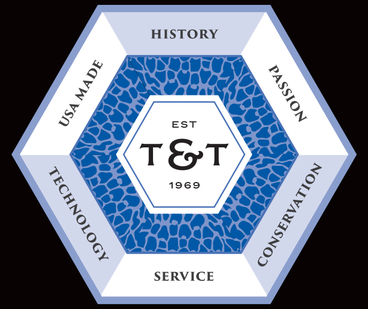
Made in USA by Skilled Artisans

Thomas & Thomas rods are built by a select group of skilled rodbuilding artisans, in our Greenfield, MA facility. From the raw material preparation to the final layer of varnish - each step in the process is performed by a specialist with years of experience. We are proud to say that every aspect of the production process for every fly rod we sell occurs in-house.

Thomas & Thomas

Points of Distinction

A simple triangle, it's said, is the strongest, most stable form in the natural world. Any force applied to one point is evenly spread throughout all three points. A cross-section of bamboo, as it turns out, reveals six perfectly nested triangles coming together in a hexagon. Just like our elegant and sturdy rods, our strength lies in 6 Points of Distinction.



History

From our roots building bamboo fly rods to designing modern rods with the highest performance composites, T&T has spent more than 45 years handcrafting premium fly rods for passionate anglers.

Made in USA

Every Thomas & Thomas fly rod is 100% American Made. Our rods are crafted where American fly angling holds its deepest roots. We believe in America, in American craftsmanship, innovation and quality.

Technology & Innovation

Premium fibers and resins require precise equipment and controls to maximize performance. Working in our state-of-the-art production facility, T&T is excited to introduce rods featuring proprietary new StratoTherm Resin and Quattro Matrix Technology.

Passion

Rod making isn't a job. It's a culture and way of life for our team. Our people are dedicated anglers as much as they are craftsmen, driven by a passion to develop the finest fly rods and to test and improve these products on the water.

Customer Satisfaction

T&T doesn't just build fly rods. We build relationships. T&T rods are built to last a lifetime, so we maintain a registry of original rod owners and serial number each rod section. If a rod suffers a mishap, T&T's repair team will quickly build an identical new section.

Conservation

Our passion for fly fishing springs from a love of the beauty, power and freedom embodied in wild fish, along with a deep respect for the environments in which they live. Preserving and protecting these fisheries is our responsibility and privilege as a leader in the industry, which is why we partner with many conservation organizations

THE NEXT GENERATION

Ask a group of experienced anglers to name the greatest dry fly rod of all time, and the T&T Paradigm is sure to be mentioned more than once. Over twenty years later, we've followed the same inspiration that made the original into a legend to create a new Paradigm for the 21st century.

Paradigm Series

The ultimate presentation rod.

Ask a group of experienced anglers to name the greatest dry fly rod of all time, and the T&T Paradigm is sure to be mentioned more than once. Over twenty years later, we've followed the same inspiration that made the original into a legend to create a new Paradigm for the 21st century.

While the advance of technology has pushed the limits of rod weight, line speed and casting distance, the essence of stalking a rising trout and presenting the fly remains unchanged. With this in mind, we set out to capture the unique feel that made the original Paradigm fly rods such a magical instrument.

Paradigm

FLY FISHERMAN GEAR GUIDE BEST NEW DRY-FLY ROD THOMAS & THOMAS PARADIGM 2020

THE DETAILS

- Lightweight Titanium finish Single Foot REC guides
- Matte Titanium finish roll-stamped hardware
- USA sourced Bird's Eye Maple spacers
- Beautiful new semi-gloss blue surface finish
- Hand-written logo, serial numbers, and additional visual accents
- Ultra-light rods with smooth, medium flex action for exceptional presentations

Avantt II Series

Effortless accuracy.

Thomas & Thomas is excited to announce the launch of the highly anticipated Avantt II, a fully redesigned second generation of T&T's acclaimed Avantt series. These fast action rods incorporate five different types of premium fibers, bound together by our proprietary aerospace resin system. Aligning these fibers at strategic angles as we roll Avantt II blanks improves strength while enhancing recovery and damping, allowing for precise tip control. With highly balanced tapers designed to optimize these advanced materials, the Avantt II loads with unmatched smoothness and efficiency, generating high line speeds and making accurate casts at all distances virtually effortless. Components have been carefully selected to maximize performance and comfort, including a new Special Wells Grip.

THE DETAILS

- Smooth Fast Action
- New Flor grade Special Wells grip on all models
- Matte gunmetal reel seat hardware with T&T's trademark roll stamped logo
- Sustainably sourced burled wood spacer
- Black Chrome Snake Brand Universal Snake Guides, with black titanium-frame stripping guide with Zirconia ceramic insert.
- Black hook keeper and gunmetal winding check
- Dark "T&T Blue" Semi-Gloss Finish Blank
- Chestnut color wraps with Spring Green accents
- 6-8wt models can be built with fighting butts and or metal reel seats

ZONE Series

Thoroughbred perfomance.

No matter what level of Fly Caster you are, the goal is always the same: Get better. Every time you step in the river or on the boat, the hope is that this next cast could be your best. The Zone series embraces that challenge with next generation innovation, bringing legendary Thomas & Thomas performance to more fly anglers than ever before. All the Zone rod models have multi-modulus composite infused with our advanced StratoTherm resin - developed for the acclaimed Avantt and Exocett series. The Zone lineup features 7 versatile models from 4-10wt to cover freshwater and most saltwater applications. Built by hand in our Massachusetts, USA facility.

NEW

Contact III+ Series

In tune from fly to hand.

Photo by Devin Olsen

Thomas & Thomas is excited to announce the release of the highly anticipated Contact III+, a fully redesigned third generation of T&T's award-winning Contact rod series. Building on the proven success of the Contact II, each model retains the familiar action and flex profiles of its predecessor, ensuring a seamless transition for anglers, now with meaningful performance enhancements.

At the core of the Contact III+ is a new proprietary composite material, resulting in a 100% pure carbon blank that is both lighter and smaller in diameter than previous generations. The reduced cross section decreases air resistance during casting and minimizes wind influence while drifting. This advanced composite also delivers a faster recovery speed, allowing the rod to return to its static position more quickly. The result is longer, more accurate casts with less effort.

Contact III+ Model	Rod Weight	Reel Balance Range (unloaded wt.)	Tippet Range	Overhead Line Weight
10' 2wt	81g / 2.86oz	113 - 133g / 4.0 - 4.7oz	4x-8x	WF2F or Comp Line
10' 3wt	84g / 2.96oz	116 - 136g / 4.1 - 4.8oz	3x-7x	WF3F
10'9" 2wt	86g / 3.03oz	130 - 156g / 3.2 - 5.2oz	4x-8x	WF2F
10'9" 3wt	88g / 3.10oz	130 - 156g / 4.6 - 5.5oz	3x-7x	WF3F
10'9" 4wt	90g / 3.15oz	133 - 159g / 4.7 - 5.6oz	2x-6x	WF4F
11'5" 3wt	93g / 3.23oz	133-159g / 4.7 - 5.6oz	3x-8x	WF3F
10'8" 6wt	138g / 4.9oz	155-200g / 5.5 - 7.0oz	0x-4x	WF6F

THE DETAILS

- All models except Contact III+ 1086 will come with two tips, one tubular tip and one solid tip.
- Premium Flor grade cork grips with ¼" composite nose increases feel and bite transmission.
- Matte black downlocking hardware updated with two locking nuts, complemented with T&T's trademark roll stamped logo and burled wood spacer.
- Gunmetal light wire single foot running guides, with one nickel titanium bendable snake guide under the tip top to reduce line wrap.
- On 10' 9" and 11'5" models, the guide sizing has been reduced to increase line control. The added number of guides on the rod reduce line sag. The 10' models have appropriately sized guides for weight forward fly lines.
- Black double foot high frame stripping guide provides a more acute angle from stripping guide to reel to reduce drag when the rod is under load. The stripping guide has been further lowered on the rod in order to reduce sag.
- Insect green and goldenrod thread wraps.
- Black hook keeper and winding check.
- Contact III+ 1086 has a full wells grip, this rod does not come with solid tip. This rod is primarily designed for migratory fish.
- Dark Blue premium lightweight Carbon tube with polished aluminum end caps.

THE ROD YOU WILL EVENTUALLY OWN

HANDMADE IN AMERICA

Exocett™ 88

The Exocett™ 88 is built to handle a wide variety of fishing situations with precision and ease.

With its easy-loading, progressive action, it's designed to adapt seamlessly - whether you're lifting and aerializing heavy sinking lines or delivering accurate floating line presentations. At 8'8" with a steep taper, the Exocett™ 88 offers ultra-fast recovery, enabling effortless long-distance casting.

Designed to minimize fatigue, it's perfect for all-day fishing. Built with proprietary multi-modulus carbon and S-Glass layups, the 88 has significantly more strength than previous composites, giving it superior hoop strength and reducing swing weight. This design provides excellent tracking, precision, and accuracy, along with extreme lifting power when you need it most.

Exocett Bluewater

Built for battling offshore beasts.

The offshore environment provides the ultimate challenge for a fly rod. Delivery of the fly must be fast and accurate, yet the rod must also apply unrelenting pressure against the world's largest gamefish. Our Bluewater Series utilizes proprietary multi-modulus carbon and S-Glass layups, to produce a three-piece rod of unparalleled strength and lifting capability. The progressive action profile ensures maximum pressure is applied to the fish while relieving stress from the angler. Tuna, billfish, and sharks are all fair game for these powerful specialty rods.

Exocett Predator

The power to cast and present the largest flies.

Muskies and other Predators are often looking for a meal that pushes the limits of what a fly angler can feasibly cast, and targeting these fish with flies often takes hours or days of casting between opportunities. Fatigue can mean not having the fly in the water when your fish is ready to eat, or not being physically prepared to execute a hook-set at the critical moment.

The Exocett Predator rod is specifically designed to meet these demands. Increased length facilitates longer overhead casts and keeps the fly deeper on the retrieve. A powerful rod tip easily lifts wet flies from the water and supports loop shape while casting the largest flies behind 350-500 grain sinking and ultracompact floating lines. The grip is an elongated full wells with a generous rubberized composite reinforcement on the higher impact upper grip. A large flare full wells and elongated fighting butt facilitate comfortable grip points to execute a boatside figure 8, and T&T's proprietary Strato-Therm resin ensures Exocett Predator rods can absorb the most vicious boatside attacks. Hardware appointments include matte black roll stamped reel seat, gunsmoke colored RECoil snake guides, and black titanium frame stripping guides.

Exocett Surf

Launch shooting heads from shore with two-hand overhead casts.

SURF

Fishing in the surf presents some unique opportunities and challenges for the fly angler. Wind and waves make it difficult to handle line and achieve maximum casting distance. That's why T&T has built a pair of rods to make it more effective and enjoyable to fly fish in the surf. Exocett Surf rods are a pair of specialized 11'2" rods intended to cast overhead with two hands. The powerful multi-modulus Strato-Therm blank has a crisp action that excels in casting overweight shooting heads and compact integrated fly lines past the breakers. An elongated full wells upper grip and rounded spey style lower grip makes for a comfortable and powerful overhead casting stroke while throwing Outbound or similar style shooting heads.

NEW

Sextant II

Powerful Pin-Point Accuracy

Designed for accuracy and quick line delivery, the new Sextant II series excels in high-stakes saltwater fishing environments, where a few inches can mean the difference between the fish of a lifetime, or a long silent ride home.

With deep power reserves and ultra-fast recovery, the Sextant II controls hard-running fish while supporting fast, accurate casts. Engineered to generate high line speed and tight, controlled loops, these rods can place the fly where you need it—at any distance. If a quick re-cast is called for, the Sextant II is capable of picking up a long line to make a new presentation with a single backcast.

An innovative material composition enhances feedback and responsiveness, enabling the angler to clearly feel the rod load and recover. The result is improved accuracy across the casting range, with the power to make long casts when needed, even in advese conditions. When opportunity comes, the Sextant II is ready.

The entire Sextant II rod family shares a smooth loading, quick recovery action that allows for precise accuracy at short distance without sacrificing the power and backbone necessary for punching flies longer distances through the wind.

SEXTANT II ROD FAMILY DETAILS:

- Stealth focused components, featuring black Nickel titanium running guides, along with PVD coated Cerecoil guides standard on all models.
- Dark blue blank, with dark blue wraps and silver accents.
- All models come with composite nose foregrip.

DNA Spey Series

Progressive Action for today's two-handed casting styles.

The DNA Spey series continues the evolution of T&T's highly regarded stable of two-handed rods. These are for the angler seeking rods that can do it all - Skagit, Scandi, Spey, and overhead - with ease. The DNA Classic is the perfect "all-rounder" and the best choice for experienced casters fishing midbelly length lines and longer lines.

Models with an XF designation are designed primarily for fishing with Scandi style lines
or shooting heads, and have a crisp, sharp feel, perfect for throwing tight loops with touch-and-go casts.

Our XD rods feature a deeper flexing profile designed for anglers who utilize "sustained anchor " casting techniques with Skagit heads and large, heavy flies. With each model individually designed to serve a distinct purpose, the DNA Spey series has the right rod to meet the demands of any two-handed fishing situation.

- 4- and 5-piece multi-modulus graphite blank with "T&T Blue" Low-Friction Finish.
- Green wraps with red edging.
- Fuji stripping guides and Universal Snake Brand guides.
- Western Spey Grip.
- Pewter gray milled aluminum down-locking reel seat.
- Includes aluminum rod tube with machined bar-stock aluminum collar and cap. Blue powder-coat with pewter Thomas & Thomas logo.

DNA Short Spey Series

T&T's new Short Spey are a pair of 11' 2" rods designed to match up with a variety of popular compact fly lines and shooting heads. These are lightweight, two-hand rods with a quick recovery and an action that generates high line speeds while providing the sensitivity to immediately detect subtle strikes. Available in 6wt and 7wt, these rods are perfect for large migratory trout and light duty Atlantic Salmon and Steelhead.

THE DETAILS

- 4-piece multi-modulus graphite blank with new semi-gloss blue finish.
- Green wraps with red edging.
- Titanium stripping guides and Universal Snake Brand guides.
- Full Wells Spey Grip
- Matte-black milled aluminum down-locking reel seat.

DNA Switch Series

Medium fast action for effortless casting with one or two hands.

We've worked hard to develop rods that really do enable you to "Switch" between any conceivable type of cast with a single rod. The versatility of these rods cannot be overstated. Every style of casting from single-handed, single-handed spey, two-handed overhead, traditional spey and sustained anchor styles can be accommodated by the unique actions of the DNA Switch. Offered in 6- through 7-weights, these adaptable rods have become a favorite for anglers pursuing everything from big-water trout to small-stream steelhead.

THE DETAILS

- 4-piece clear-coated graphite blank.
- Black wraps with olive edging.
- Titanium stripping guides and Universal Snake Brand guides.
- Full Wells Switch Grip.
- Spalted maple spacer.
- Black milled aluminum, down-locking reel seat.

DNA TroutSpey Series

Legendary T&T two-handed action in a trout-sized series.

Cover trout water like never before with the new DNA TroutSpey, a rod defined by the ability to make long casts with ease and mend line far beyond the capabilities of single-handed rods.

Traditional wet flies, large streamers and mouse patterns are all on the menu for the angler preferring to cast with two hands. With a traditional progressive taper that loads easily yet has the power to reach distant lies, the DNA TroutSpey brings a new dimension to swinging or skating flies for big trout on big water.

THE DETAILS

- 4-piece multi-modulus graphite blank in classic "T&T Blue" Low-Friction Finish.
- Green wraps with red edging.
- Fuji stripping guides and Universal Snake Brand guides.
- Western Spey Grip.
- Black milled aluminum down-locking reel seat.
- Burled black ash spacer.

NEW

Lotic II Series

Crisp, medium action with the subtle feel of fiberglass.

Thomas & Thomas is pleased to introduce the new Lotic II for 2026. Building on the success of the original Lotic series, the Lotic II retains the feel and performance anglers have come to expect while expanding the lineup with two new models: a 6’3” 2-weight and a 7’10” 6-weight. These additions complete the family of medium-action fiberglass fly rods, offering exceptional recovery, crisp performance, and lightweight responsiveness. The Lotic II bridges the gap between traditional slow-action E-glass rods and full-flex graphite rods. Its steeply tapered S-glass blanks provide a lively, lightweight feel with a responsive tip, delivering tight loops, excellent line speed, and surprising power without sacrificing touch or presentation.

THE DETAILS

- Three-piece construction with progressive-action, bamboo-colored S-glass blanks.
- Models 2-weight through 5-weight feature a half-wells cork grip with a cork spacer and silver hardware reel seat
- The 6-weight features a full-metal silver reel seat, a 7-inch full-wells grip, and a 1-inch fighting butt.
- Snake Brand ECOating® snake guides wrapped with cinnamon-colored thread.
- Silver hook keeper on all models.

Bamboo

PROFILE Troy Jacques

Trained by legendary Master Rod Makers Tom Dorsey and Tom Moran, Troy Jacques has hand-crafted T&T bamboo rods for 20 years. Whether a bamboo aficionado or not, anyone who stops by our Greenfield workshop and visits with Troy will immediately appreciate the tremendous vision and rare skill that goes into his art.

Crafting from bamboo represents the apex of rod making, marked by subtleties and quirks specific to individual rod makers. Each T&T Bamboo Rod distinctly radiates Troy's fine touches - smoothly milled and seamlessly paired pieces, exquisitely engraved nickel silver accents and rich varnishes.

Troy transforms raw bamboo into stunning fly rods. He's refined his craft and learned to adapt to the unique characteristics of each piece of bamboo that passes through his hands. No two rods are alike, making each of his pieces a true collector's item.

Ordering Bamboo Rods

All Thomas & Thomas bamboo rods are handbuilt to order. After learning more about you, we will advise on the best rod to suit your needs and offer an estimate for the time it will require to build your rod.

Any T&T bamboo rod can be ordered sans pareil to incorporate your own specified custom options. Some upgrade charges may apply.

Whistlepig Colaboration

We have developed a very special bamboo rod with our friends at WhistlePig Rye Whiskey in Vermont. The bamboo is 'toasted ' over a Rye whiskey barrel giving it unique character and the reel seat is crafted from the white oak barrel staves. Please contact us for more details and ordering information.

FEATURES:

- Rods for #2, #3 and #4 lines feature a nickel silver butt cap and oxidized black sliding ring, burled walnut reel seat spacer and Cigar Grip.
- Rods for #5,#6, #7 and #8 lines are fitted with a hand-buffed, nickel silver, up-locking reel seat, mortised burled walnut spacer and Western Grip.
- Sextant saltwater rods are fitted with salt-safe, milled aluminum, up-locking reel seat, Full Wells grip and fixed fighting butt.
- Each rod is accompanied by an aluminum tube finished with precision machined brass fittings.

Sextant Series

Powerful, fast action tapers for the salt.

The Sextant series rewrites a page from the history of fly fishing, when adventurous anglers were exploring new frontiers with bamboo rods. Designed for today's saltwater lines, Sextant rods continue the T&T heritage of blending tradition and innovation, with the capacity to make long casts and bring large fish to hand.

THE DETAILS

- 2 piece, fast action, swelled butt
- Hard, synthetic finish
- Dark olive wraps
- Salt-safe, milled aluminum real seat
- Full Wells grip with fighting butt

Model	Sections	Action	Length	Line

Sextant	2	Fast	8' 3"	#8
Sextant	2	Fast	8' 3"	#9
Sextant	2	Fast	8' 5"	#10
Sextant	2	Fast	8' 5"	#11
Sextant	2	Fast	8' 5"	#12

Individualist

The finest rods with the finest finishes.

Our Individualist Series bamboo rods are designed with a complex taper that turns from a delicate tip top to the distinctive T&T swelled butt. All rods come with an extra tip, and matched tips cut from the same culm are available for an additional charge.

Built from the finest individually-selected Tonkin cane, flamed bamboo is complemented by translucent and cinnamon edging guide wraps, along with medium brown ferrule wraps.

THE DETAILS

- 2-piece, complex taper, swelled butt.
- Cinnamon and medium brown wraps.
- Nickel silver reel seat.
- Grip details vary by model.
